

Private Garden, Henley-on-Thames, Oxfordshire | Chailey Multi Stock Paver

paving the way

“I was approached by my clients after they had seen a programme on the television about my own garden, during which I emphasised the importance of the visual integration of inside and outside spaces”...

...so comments the designer and photographer, Peter Aldington: “An early design decision was to extend the brickwork of the house into the garden, creating enclosure and screening elements, with the brickwork providing a visual continuity. We settled for the Old Trinity Stock for walls, with a slightly livelier Chailey Multi Stock for paving.”

Sustainable Urban Drainage Systems - SUDS

For many driveways joining the public highway, the use of surface finishes, such as paving, must form part of a sustainable urban drainage system (SUDS) to allow surface water to pass through and minimise excess run-off during heavy rainfall.

Ibstock has now introduced the only range of clay stock pavers that meet this requirement and which can also be used with water harvesting systems.

The unique tapered spacers ensure consistent gaps without any unsightly nibs. The lasting beauty of clay stock pavers can now be enjoyed in most domestic use situations.

Ibstock also offers other clay paver options; rigid pavers, bedded and jointed with mortar on a concrete sub-base and flexible pavers, bedded on an approved sub-base.
