Please note that special shaped bricks may be solid, perforated or frogged. In all illustrations, the intended brick face/s are shown in darker shading. Surfaces not visible in diagrams will not be faced. Light shaded faces may contain voids or factory identification marks.

When specifying you should ascertain the orientation of any voids present.

- It is important to apply the correct design detail and component specification when using brick.
- All bricks for use in the above applications must have a durability designation of "F2" to BS EN 771-1.
- For freestanding and earth retaining walls, particularly in *severe exposure areas, Ibstock recommends the use of overhanging copings with weather throatings on the underside.
- The recommendation also includes the incorporation of movement joints, DPCs, waterproofing and the correct mortar specification and joint profile as cited in BS EN 1996, PD 6697, BS 8002 and Ibstock Brick Ltd.
- The use of brick as treads and risers for garden paths or as path edging is not recommended. These are paving applications and are not covered by Ibstock's brick warranty.
- The product guarantee will be invalidated if the correct design detail and associated component specification has not been applied.

* severe exposure areas include Scotland, Wales, the North West and South West of England which are subject to higher levels of wind driven rain as given in BS 8104 and NHBC Standards, together with prolonged and repeated freezing conditions.

Further Information on correct detailing is available on the Ibstock website www.ibstock.com or by calling the Ibstock Design & Technical Helpline on **0844 800 4576**.
